Planning Your Cricket Statistic Spreadsheet

Before diving into building your spreadsheet, it?s essential to plan the structure and data categories you want to track. A well-organized plan ensures scalability and ease of use.

Identify Key Metrics

Common cricket statistics include:

- Player Details: Name, team, role (batsman, bowler, all-rounder)
- Batting Stats: Matches, innings, runs, not outs, highest score, batting average, strike rate, hundreds, fifties
- Bowling Stats: Matches, overs, runs conceded, wickets, economy rate, bowling average, five-wicket hauls
- Fielding Stats: Catches, stumpings, run-outs
- Match Data: Date, opposition, venue, match result, format (Test, ODI, T20)

Decide on Data Structure

A typical approach involves creating separate sheets for:

- Players: Basic player info
- Matches: Details of each match
- Player Performance: Performance per match
- Summary Statistics: Aggregated performance metrics

Building Your Excel Cricket Statistic Spreadsheet

Step 1: Create a Master Player List

Start with a sheet called "Players" that includes:
