- Lightly sketch the outline of the head at the top for reference.

Step 2: Draw the Nasal Cavity and Pharynx

- At the top of the torso, draw two small, curved lines to indicate the nasal cavity.
- Extend a vertical line downward from the nasal cavity to form the pharynx, connecting to the larynx.

Step 3: Add the Larynx and Trachea

- Just below the pharynx, draw a small, box-like structure for the larynx.
- From the larynx, draw a vertical tube (the trachea) descending toward the lungs. Include horizontal lines to represent the cartilage rings.

Step 4: Draw the Bronchi and Lungs

- At the lower end of the trachea, split into two branches: the left and right bronchi.
- Extend these branches into the lungs, which should be on either side of the chest cavity.
- Sketch the outline of the lungs as two large, rounded shapes with a slightly irregular surface.

Step 5: Detail the Bronchioles and Alveoli

- Inside the lungs, draw smaller branches emanating from the bronchi, representing bronchioles.
- At the ends of these branches, sketch clusters of tiny sacs to represent alveoli.

Step 6: Draw the Diaphragm and Other Structures

- Beneath the lungs, draw a curved line to depict the diaphragm.
- Add labels to each part, ensuring clarity and accuracy.

Step 7: Label Each Part

- Use lines or arrows pointing to each component.
- Write the names clearly, using a consistent font or handwriting.

Sample Diagram Description

Imagine a simplified side view of the human torso with the following features:
